

Sundown pell-@-bed

*A new approach to
animal and poultry bedding*

Sundown Pellebed is an exciting new poultry bedding made from a sterile straw crumble. It is a perfect combination of low bulk density to ensure good floor coverage and enough soft straw to provide good insulation and a soft, stable and absorbent litter.

- The crumble expands with moisture, most broiler crops do not need any top up bales.
- It has low micro counts, high ammonia absorption and results in improved foot health.
- Sundown Pellebed is so soft that the birds are able to exhibit natural dust bathing behaviour.
- The bedding can be blown directly into sheds by a Sundown vehicle, where it can be easily spread using a spinner and a box or it can be supplied in 15kg bags.
- The crumble can be coupled with Sundown Green top up or enrichment bales.

The unique production process ensures that **Sundown pell-e-bed** has extremely low microbe counts. It is regularly tested by a DEFRA approved laboratory. The straw is locally sourced, fully traceable and sustainable being an annual by product of agriculture.

Pellebed can be delivered in 15kg bags or alternatively in bulk on our own lorry to be blown into sheds.

May be collected from site upon prior arrangement.

TESTIMONIALS

‘As a farmer and in general I am a sceptical guy, so naturally I was going to be hesitant about trying a different substrate for our poultry farm. At first I was dubious about the pellets as it felt like was walking on marbles, however our chicks took to the bedding straight away and have flourished since placement. I am currently half way through the crop and the pellets have broken/fluffed up and created a nice even, dry substrate for our birds. The bedding coupled with the chopped straw enrichment bales (also from Sundown) compliment one another well and encourage the birds to display plenty of natural of behaviour.’

John Jevons, 1st June 2020

‘I’ve been using Sundown Pellebed for 4 crops over an 11 shed site. Before using straw pellets we were lucky to obtain a podo payment over half the sheds, now we regularly get the podo payment across the whole farm, with scores as low as 2% in some sheds. I can’t stress how beneficial this product is for low podo scores, bird welfare and lower top up bales used. It’s a perfect product.’
